

CSS

What is CSS?

- CSS, which stands for Cascading Style Sheets, is the language used to style and design the visual presentation of a webpage.

CSS

The 3 Ways to Add CSS to HTML

Inline CSS

- Style directly to a single HTML element using the style attribute.

Internal CSS

- Write CSS inside a <style> tag in the <head> section of your HTML file.

External CSS

- Write CSS directly on an HTML element using the style attribute. Avoid this unless it's for a quick fix!

CSS

CSS Selectors

Element Selector

- `p { color: green; }`

Class Selector

- `.highlight { background-color: yellow; }`

ID Selector

- `#main-title { font-size: 40px; }`

Pseudo-Selector

- let you style an element only when a user hovers over it, or style just the first letter of a paragraph.

Responsive Design

Media Queries

- Media queries let you apply CSS rules only when the screen meets certain conditions , like being smaller than 768px wide.

Flexbox

- For 1-dimensional layouts (rows OR columns)

CSS Grid

- For 2-dimensional layouts (rows AND columns)
